DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 16, 18-22, 24-27, 29-31 are rejected under 35 U.S.C. 102(e) as being anticipated by Jones et al. (US Patent 5,696,789).

Referring to claims 16, 22, 27, Jones discloses a method, using a receiver (figure 2A, reference 18), comprising steps of: processing a header in a spread-spectrum signal, to generate a reference signal (col. 12, lines 1-25, figure 2B, i.e. a trigger signal); despreading, a multichannel spread-spectrum signal embedded in the spread-spectrum signal as a plurality of received spread spectrum channels (col. 3, lines 21-38); multiplexing the plurality of received spread-spectrum channels as received data (col. 7, lines 24-40; col. 11, lines 49-67).

Referring to claims 18, 24, and 29, Jones discloses all aspects of the claimed invention and further teaches after the step of multiplexing, the step of storing the received data (col. 12, lines 29-33).

Referring to claims 19, 25, and 30, Jones discloses all aspects of the claimed invention and further teaches after the step of multiplexing, the step of decoding the received data (col. 11, lines 33-48; figures 2A,2B).

Application/Control Number: 09/732,186

Art Unit: 2664

Referring to claims 20, 26, and 31, Jones discloses all aspects of the claimed invention and further teaches before the step of processing the header, translating the spread-spectrum signal from a carrier frequency to a processing frequency (col. 12, lines 41-47; finding the intended channel after matched filter correlation).

Referring to claim 21, Jones discloses all aspects of the claimed invention and further teaches generating, responsive to the reference signal, control and timing signals (col. 12, lines 20-31, mixes corresponding spread code with signal from level control, time tagged after signal recovered).

Allowable Subject Matter

3. Claims 17, 23, and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

- 4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - Hylton et al. (US Patent 5,630,204) discloses distribution of broadband signals and two-way communication of control signal
 - Hylton et al. (US Patent 5,613,191) discloses audio-video, control signal and voice using CDMA
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yvonne Q. Ha whose telephone number is 703-305-8392. The examiner can normally be reached on Monday-Friday 7a.m.-4p.m. Eastern.
